

BACKUP AND RECOVERY SOLUTIONS

Your company's single most valuable asset may be its data.

When something goes wrong, you will not define success by how the data was backed up — all that matters is getting your data back. All of it. All the time. All correct.

Fastest Recovery Times

We keep your down time to an absolute minimum. With methods such as Continuous Data Protection (CDP), Virtual Machine Replication, Virtual Disaster Recovery (VDR), and Snapshots, we can guarantee aggressive recovery objectives for even large amounts of data.

Affordability

Our costs are based on stored data capacity after compression and are always constant on per GB basis.

01-50 GB	\$1.60	100-250 GB	\$1.10
50-100 GB	\$1.35	250-50 GB	\$0.80

Maximum Security and Reliability

Your data is protected at all times with the highest levels of security and compliance. Our agentless architecture is secure because it does not rely on vulnerable agents that need to be installed on each machine. Processes such as autonomic healing and restore validation ensure reliability in your recovery.

Maximum Manageability

Our product delivers continuous control with low-touch manageability, centralized operations and capacity management that give you a comprehensive, unified, organization-wide view of your systems and devices.

Getting Started

1 Sign Up

Go to dotcommand.net/recovery and schedule a time with our Staff

2 GoTo Meeting with Staff

In an online session, our tech will setup and configure your backup, and run your first backup to the cloud.

3 Receive confirmation

You will receive confirmation emails each time the backup runs or as you decide with the staff.

For Recovery

1 Contact DCC

You can text, call, or fill out an online form to notify us of your recovery need.

2 Staff runs recovery

Our staff will contact you and run the recovery process for specified files.
